RWS
Certified system for dynamic vehicle weighing

System designed to accurately weigh the vehicle in transit, quickening and simplifying the weighing operations.

With the RWS, it is very easy to weigh a vehicle: one just needs to pass slowly on the weighing platform, for the real-time and automatic acquisition of the weight of each axle, with the final printout of the weighing and total report.

The RWS system is certified OIML R134 for the dynamic weighing of vehicles.

RWS has also a wide range of available options for creating a weighing system based on the customer’s needs.
